

# How to add a signature to a PDF

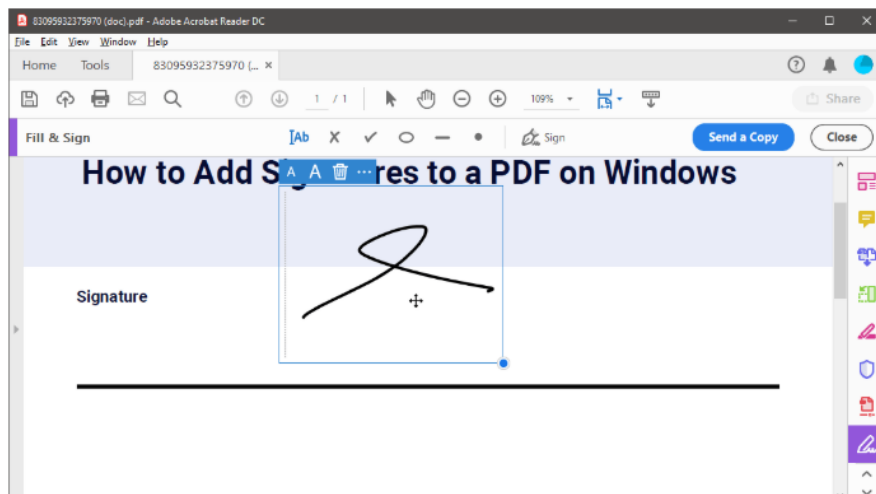

1. Open the PDF file in **Adobe Acrobat Reader**. (You might have to download Adobe Reader if you do not have it installed already.)
2. Click on **Fill & Sign** in the **Tools** pane on the right.

3. Click **Sign**, and then select **Add Signature**.

4. A popup will open, giving you three options—**Type**, **Draw**, and **Image**. Once you're done, click the **Apply** button.  
**Type** allows you to type your name in cursive format. You're free to change the style of the signature.  
**Draw** allows you to draw the signature using your mouse, touchpad, or a pen if you're using a touchscreen device.  
**Image** allows you to select an image file of your signature.
5. Drag, resize and position the signature inside your PDF file.

6. **Save** your signed PDF document so you can easily find it to email.
